• Bone Regeneration	£300 - £400
• High Definition 3D CT Scan (both jaws)	£175
• In-House Sedation	£300 / hour

A single completed implant includes all of the surgery, materials, time, x-rays and an initial follow up appointment. This cost does not include the removal of any teeth required for your treatment, any bone augmentation which is sometimes necessary, or a temporary tooth to fill a gap (not required for a tooth at the back of the mouth). We will of course inform you at your assessment of all the costs associated with your proposed treatment and this will also be detailed in your comprehensive written treatment plan.

When calculating the price for more complex cases with several implants, where you have multiple adjacent missing teeth present they can often be replaced with fewer implants and a fixed bridge. Because you do not have to have one implant per tooth, the cost of your treatment can be reduced.

However, more complex cases often require very detailed planning with special models, stents, guides and computer guided surgery. This can result in some additional costs necessary to plan the initial surgical phases. Every patient is provided with a comprehensive written treatment plan with the costs of all of your implant treatment clearly laid out.

Special Offer – Come in and have a heart-to-heart with one of our Implant Co-ordinators. This initial discussion is absolutely free and you can explore all the implant options that would be suitable for you and get some idea of the likely costs. If possible, we'll try to introduce you to a member of our surgical team at this time.

If you decide to go ahead, then we'll arrange for you to come back and spend some time with one of our dental surgeons. This in-depth consultation costs £175 and includes an extremely detailed 30 point examination, all x-rays including 3D CT Scan, study models, photographs and a comprehensive and fully costed treatment plan.
